SUCCESS, GRADES, RETENTION, AND GRADUATION
THE ROLE OF ASSESSMENT OF INTRAPERSONAL AND INTERPERSONAL COMPETENCIES (2017)²

Researchers identify three competencies most frequently showed evidence of supporting students' college persistence and success, as measured by grades, retention and graduation: A sense of belonging, a growth mindset and personal goals and values.

Educational Attainment—the number of years a person spends in school—strongly predicts adult earnings, as well as health and civic engagement. Yet relative to other developed nations, educational attainment in the United States is lagging, with young Americans who heretofore led the world in completing postsecondary degrees now falling behind their global peers. As part of a broader national college completion agenda aimed at increasing college graduation rates, higher education researchers and policy makers are exploring the role of intrapersonal and interpersonal competencies in supporting student success.

A Sense of Belonging, meaning that college students (particularly underrepresented minorities and first-generation college students) feel that they belong in college, fit in well and are socially integrated. Approximately 85 percent of the studies measuring students’ sense of belonging demonstrated a positive impact of belonging on students’ college GPAs.

A Growth Mindset, referring to college students’ beliefs that their own intelligence is not a fixed entity, but rather a malleable quality that college can help improve. Seventy-five percent of the studies measuring students’ growth mindset showed this characteristic had a positive impact on students’ college GPAs.

Personal Goals and Values that college students perceive to be directly linked to the achievement of a future, desired end. Approximately 83 percent of the studies measuring personal goals showed this characteristic as having a positive impact on students’ final course grades.
HOW SMART IS YOUR COUNTRY?

An intelligence quotient or IQ is a score derived from a set of standardized tests developed to measure a person's cognitive abilities ("intelligence") in relation to their age group.

Around the world, the average IQ is the highest for East Asians around 106, for Whites in the United States and Europe about 100, and for Blacks about 85 in the United States and 70 in sub-Saharan Africa. Some people may jump to conclusion that Chinese and Japanese are the most intelligent people in the world, and therefore, the Asian race is the superior race, just like some Americans believe that White people are superior over other races in the US. But that was the folly of Hitler, who believed in the American Eugenics program and implemented it in Germany. American eugenics was successfully implemented heavily influenced the German experimentation in their emerging theory of eugenics.

However, IQ not only depends on a person's innate abilities (the genotype or the nature), but also the nurture. A study of 1,890 identical twins has found that strong early reading skill might positively affect later intelligence. The twins, who are part of an ongoing longitudinal study in the United Kingdom, share all their genes as well as a home environment. Differences shown in intellectual ability came from experiences they didn't share. The twin with stronger early reading skills was found to have higher overall intellectual ability by age 7. From this study, it is very clear that nurturing environment has a considerable impact on the IQ of a person. The study, published in the journal Child Development, was conducted by researchers at the University of Edinburgh and King's College London.

In another study, children whose parents supported them in labeling quantities of small sets performed better on math tests in preschool than children whose parents didn't support them in this way. These children also did better on addition and subtraction problems as late as first grade, suggesting that early maternal support of numerical skills may have lasting and strong connections to children's math achievement. These connections were strong and persisted and the more general level of learning stimulation mothers provided, the higher the children's intelligence.

Yet another study, published last month in the Journal of Gerontology, Series B: Psychological and Social Sciences, finds that people who engaged in more regular sexual activity scored higher on tests that measured their verbal fluency and their ability to visually perceive objects and the spaces between them. Thus, IQ is not only dependent on the nurturing during the childhood, but also on the sexual activity of seniors.

Differences in national income are correlated with differences in the average national intelligence quotient (IQ). Differences in average national IQs constitute one important factor, but not the only contributing factor to differences in national wealth and rates of economic growth, depending upon the author's perspective.
Differences in average national IQs are dependent on the important contributing factors such as the differences in national wealth and rates of economic growth, whether colonized by imperialist colonizers such as the United Kingdom, France, Portuguese, the Dutch, etc., whether manipulated into unending wars such as Iraq, Afghanistan, Syria, Libya, etc., and whether the population has been subjected to slavery, and discrimination within a country such as the blacks in America or in South Africa. Thus, the bias of the author/researcher would play a bigger role than anything else in the IQ evaluation, e.g., in the United States, 15% to 20% of the Black IQ distribution exceeds the White median IQ, i.e., many Blacks obtain scores above the White average. It cannot be ignored that the genetic component in human variation, including between groups, is not only poor science, it is likely to be injurious both to unique individuals and to the complex structure of societies, the authors’ state. Despite the fact that 15% to 20% of African American IQ exceeds the White median IQ and that so many Black Americans score above the average of White Americans, the author attempts to dilute Black American high scores by the implication of genetic mixing. Obviously, many Black Americans are White Americans born to White American Women and brought up in Whit American households, e.g., Former President Barak Hussain Obama.

The statistical hypocrisy and bias are clear, e.g., Obama was hounded for being the first black president for the entire tenure as president and continue to berate him and his legitimate American citizenship was questioned by the Birthers of America who continue to believe that Obama was illegitimate who forged his birth certificate, despite their leader and current President Trump's acceptance of Obama's legitimacy as a citizen of America, and despite the fact that a child born to an American citizen anywhere in the world is a citizen of America by birth under the American Law. "natural-born" means a citizen at birth — which Cruz was, by virtue of being born abroad to a US citizen (his mother). Previous Republican presidential nominees John McCain and Barry Goldwater also were born outside the country. Now even if Obama concedes that he was born on Mars to his White American mother, like Cruz born in Canada, he would not be a legitimate president to Trump and the Birthers. That is why it was stated "There are three kinds of lies: lies, damned lies and statistics."

Good statistical practice is an essential component of good scientific practice, the statement observes, and such practice "emphasizes principles of good study design and conduct, a variety of numerical and graphical summaries of data, understanding of the phenomenon under study, interpretation of results in context, complete reporting and proper logical and quantitative understanding of what data summaries mean."
It appears that misuse arises from various sources: 1) degrees of competence in statistical theory and methods, 2) honest error in the application of methods, 3) egregious negligence, and 4) deliberate deception (misconduct)\textsuperscript{15}.

Humans are a complex species with plastic brains that allow rapid behavioral changes from one generation to the next through cultural evolution. Brain plasticity means our brains can be wired and rewired by experience\textsuperscript{16}. Accordingly, multiple traits compose a broad definition of what it means to be an educated person. Indisputably, being an educated person is associated with having a certain command of a curriculum, and knowledge of theories and facts from various disciplines. But the term educated is also associated with the individual development, for example, that individuals are equipped with traits and skills such as critical thinking skills, problem solving skills, social skills, persistence, creativity, and self-control, etc., that allow them to contribute meaningfully to society and to succeed in their public lives, workplaces, homes, and other societal contexts. These traits are often called, generically, non-cognitive skills.

Like persistence, dependability and other under-studied traits also play an important role in work and school success as do more easily measured skills, such as those recorded on achievement tests. Numerous instances can be cited of people with high IQs who fail to achieve success in life because they lacked self-discipline and of people with low IQs who succeeded by virtue of persistence, reliability and self-discipline. While IQ is well set by age 8, non-cognitive skills such as dependability continue to develop, and can be learned. American academics and statisticians have a bias toward believing that cognitive skills are of fundamental importance to success in life. However, social skills and motivation have large payoffs in the labor market\textsuperscript{17}. Blaming the race and ethnicity for the deficiencies has been an easy escapist route for many societies, as they contend with the competitive political, military, and economic realities of global village\textsuperscript{18}.

\textbf{Cognitive and non-cognitive deficits emerge early in the childhood, and if corrected, create high-skilled adults. Studies suggest that the early deficiencies can be remedied only by actively intervening early in failing families, without compromising the privacy and autonomy of the family in America, through schools by providing the required “nurturing” that makes the difference in the lives of future citizens of America, as shown in the Twin study discussed above.}

A study published in 2005 evaluated the IQ of all 42 presidents and proved to the world that each and every American President from the first to the 42\textsuperscript{nd} had very high IQ, a lot more than the Asian average. The lowest IQ was 120 given to President Grant (see the table below), which is very high in comparison to average White Americans (100) and the Asians (106). Presidents with least IQ are given below, who are above average compared to above average Americans.

American Presidential IQs

The above graphs indicate that the success of a president did not depend on the IQ, and in fact, some of the presidents with lower IQ were more successful than or as successful as the president with the highest IQ.
May the golden-eyed Sanitar come hither!
Shining forth he rises from the lap of the damne!
Praised by singers, my God Sanitar!
Stopped forth and never missed his place!
He steps forth the splendor of the sky the wide!
Seeing, far-shining, the shining wanderer!
- Rig Veda, vii. 65
10th Smartest: Minnesota

% of Population With Bachelor's Degrees or Higher: 33.5%
Median Household Income (2013): $60,702 (9th)
Average SAT Score (2013): 1780
Average IQ and Ranking: 103.7 (5th)
The land of 10,000 lakes is home to 31 of the top 1000 publicly traded companies in the country including Target (TGT), SuperValu (SVU) and Best Buy (BBY). The world famous Mayo Clinic is also located in the Minnesota and employs 30,000 people in the state. As of 2006, more than 90% of seniors in the Minnesota public school system graduated, while the state led the country with the highest average ACT score in 2007.

9th Smartest: New York

% of Population With Bachelor's Degrees or Higher: 34.1%
Median Household Income (2013): $57,369 (16th)
Average SAT Score (2013): 1463
Average IQ and Ranking: 103.7 (5th)
The state of New York is home to the country's largest city, New York City, which is home to some of the biggest companies in the United States. Telecom companies like Verizon (VZ), banking institutions like JP Morgan (JPM) and Citigroup (C) and media conglomerates like ABC (DIS), CBS (CBS) and NBC (CMCSA) all call New York home. New York's gross state product in 2010 was $1.16 trillion, third in the country behind California and Texas.

8th Smartest: New Hampshire

% of Population With Bachelor's Degrees or Higher: 34.6%
Median Household Income (2013): $64,230 (7th)
Average SAT Score (2013): 1567
Average IQ and Ranking: 104.2 (2nd)
New Hampshire boasts the seventh highest median household income in the country at $60,567. The state also has no general sales tax and no personal income tax. As of October 2010 the state's unemployment rate was 5.4%. According to a study by Phoenix Marketing International in 2013, the state had the eighth-largest...
O Sun God, Sanat! 
Then dazzling fault of life-parasuama light!
Sublime mystery spreading from afar!
Swift became that burst too potent on the sight!
This radiant type of strength and youth!
Glowing eternally!
He alone shines!
All luminaries get illuminated by His Illumination!
The whole Universe is enlightened by His light!

concentration of millionaires per capita in the country with a ratio of 6.48%.

**7th Smartest: Vermont**

- % of Population With Bachelor's Degrees or Higher: 35.7%
- Median Household Income (2013): $52,578 (20th)
- Average SAT Score (2013): 1540
- Average IQ and Ranking: 103.8 (4th)

The state boasts the second lowest unemployment rate in the country at 3.3%, behind only North Dakota. Vermont is home to IBM (IBM) which employs 5,400 people in the state and Fletcher Allen Health Care which employs another 5,000 Vermonters. Vermont has the lowest ratio of teachers to pupils in the country and 91% of the eligible population has graduated from high school.

**6th Smartest: Virginia**

- % of Population With Bachelor's Degrees or Higher: 36.1%
- Median Household Income (2013): $62,666 (8th)
- Average SAT Score (2013): 1528
- Average IQ and Ranking: 101.9 (16th)

The Commonwealth of Virginia has the eighth highest median household income in the country at with nearly 10% of households earning at least $200,000. The state boasted an unemployment rate of 5% as of March of this year. The Northern Virginia area, just across the Potomac River from Washington D.C., is the hub for employment for the northern part of the state, while the tidewater region with major naval bases in Norfolk, contribute to employment in the eastern and southern parts of the state.

**5th Smartest: New Jersey**

- % of Population With Bachelor's Degrees or Higher: 36.6%
- Median Household Income (2013): $70,165 (3rd)
- Average SAT Score (2013): 1521
- Average IQ and Ranking: 102.8 (12th)

New Jersey posted the third highest per capita income in the country at $51,358 and a median household income of $69,667, second highest in the country. New Jersey is a hub for the pharmaceutical, chemical development, food processing and telecom industries. The state does have a high unemployment rate - 6.9%-- highlighting the disparity between the haves and the have

notes in the state. New Jersey also has the highest disparity in the nation between what it pays in federal
taxes ($77 billion) to what it receives from the federal government ($55 billion).

### 4th Smartest: Connecticut

- % of Population With Bachelor's Degrees or Higher: 37.2%
- Median Household Income (2013): $67,098 (5th)
- Average SAT Score (2013): 1532
- Average IQ and Ranking: 103.1 (9th)

Connecticut's personal income per capita was the highest in the nation last year at $60,847 while median household income was $67,276. Connecticut also has the second largest gap in the U.S. between the average incomes of the top 1% of the state's residents and the bottom 99%. The state's gross state product in 2012 was $229.9 billion. Connecticut is home to some of the oldest and most prestigious private schools and universities in the country, including Yale and Wesleyan Universities.

### 3rd Smartest: Maryland

- % of Population With Bachelor's Degrees or Higher: 37.4%
- Median Household Income (2013): $72,483 (1st)
- Average SAT Score (2013): 1483
- Average IQ and Ranking: 99.7 (32nd)

Maryland households are the wealthiest in the country with a median household income of $71,122. 15.5% of the state's workforce are employed in high paying, high skilled professional, scientific or management careers, the highest percentage in the country. As of May this year the state boasted a 5.5% unemployment rate.

### 2nd Smartest: Colorado

- % of Population With Bachelor's Degrees or Higher: 37.8%
- Median Household Income (2013): $58,823 (12th)
- Average SAT Score (2013): 1721
- Average IQ and Ranking: 101.6 (20th)

Colorado was listed as the third best state for business in the country by CNBC in 2010. The state has the third highest concentration of professional, scientific and management workers behind only Maryland and Virginia and has a median household income of $56,765. 6.6% of the state's households earn over $200,000 a year. Samsonite, Coors (TAP) beer and Celestial Seasonings teas are all headquartered in the state. The United States Air Force Academy calls the state home as well as multiple military installations including NORAD.

### The Most Smart State: Massachusetts

- % of Population With Bachelor's Degrees or Higher: 40.3%

O Sun God, Surya! 
Then dazzling font of life—paramanius light! 
Shimmering mystery spreading from afar! 
Swift became the burst too potent on the sight! 
This radiant type of strength and youth! 
Glowing eternally! 
He alone shines! 
All luminaries get illuminated by His Illumination! 
The whole Universe is enlighted by His light! 
— Katakapanidh

May the golden-eyed Sancara come hither! 
Shining forth he rises from the lap of the dame! 
Praised by singers, my God Sancara! 
Stopped forth and never missed his place! 
He steps forth the splendor of the sky the wide! 
Seeing, far-shining, the shining wanderer! 
— Rig Veda, vii. 65

Why the World Is Smarter Than US: And How They Got That Way

The Smartest Kids in the World: And How They Got That Way

Collins, Hypocrisy in American Political Attitudes, A Defense of Attitudinal Incongruence

Offers a unified approach to looking at types of attitudinal hypocrisy in political attitudes and the origins of each. Utilizes a multidisciplinary approach that incorporates political science, psychology, and American history to answer questions not addressed by previous scholarship. Provides a counterintuitive defense of hypocrisy by demonstrating the universality of in in political attitudes and, subsequently, removing its negative stigma.”

“This book illuminates, and ultimately defends, attitudinal hypocrisy within the personal politics of Americans by utilizing statistical analyses within political history, social psychology, public opinion, and political science. Within a simple and parsimonious model of political attitudes, along with a novel method of calculating and operationalizing what attitudinal hypocrisy is, the book argues that the wounding of conflicting attitudes is a necessary characteristic of the American electorate. It uses an innovative multidisciplinary approach to answer some of the most pervasive questions in American politics: Why do conservatives preach the value of economic libertarianism, but decry the lack of government involvement in social issues and the military? Why do liberals extol the virtues of a regulatory economic state, but not a cultural or military state?”

The Hypocrisy Of Pro-Deportation Cuban Americans. More and more, Cuban hardliners are speaking out in support of Trump. http://www.huffingtonpost.com/entry/the-hypocrisy-of-pro-deportation-cuban-americans_us_5838d6f0e4b0a79f7433b60c

First, it was President Obama. Lately, it’s been Ted Cruz. Now, it’s Marco Rubio whose “White House eligibility isn’t a sure thing,” says Donald Trump and won’t say that Marco Rubio is eligible to be president: https://www.washingtonpost.com/news/post-politics/wp/2016/02/21/donald-trump-wont-say-that-marco-rubio-is-eligible-to-be-president/?utm_term=.ac42a6598241
